

Zimperium for VMware Workspace ONE® UEM

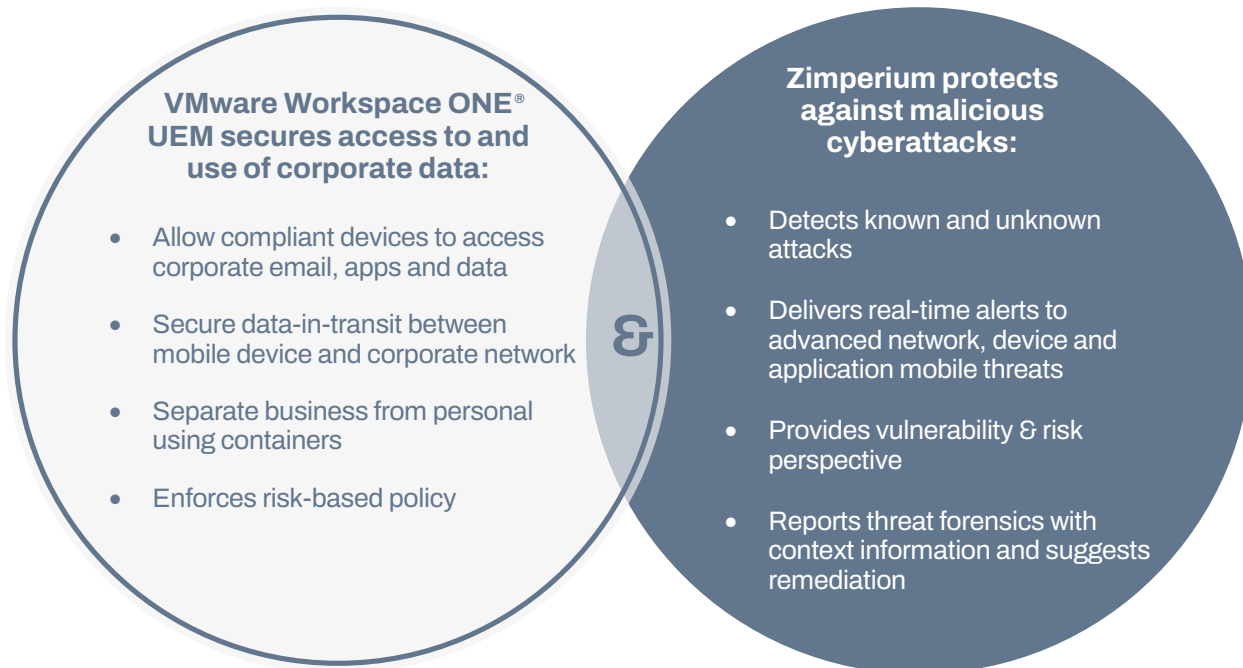

Enabling complete end-to-end mobile threat protection

Complete Mobile Security

VMware Workspace ONE® UEM and Zimperium have partnered to provide a complete enterprise mobile security solution that delivers sophisticated threat protection for mobile devices against known and unknown threats to ensure corporate data and networks are not compromised by a mobile attack.

Together, VMware Workspace ONE® UEM and Zimperium enable enterprises to manage and secure mobile devices against the broadest array of network, device and application mobile attacks. Zimperium continuously detects and analyses threats and provides VMware Workspace ONE® UEM with the visibility to enact risk-based policies to protect mobile devices from compromising the corporate network and its assets.

The integrated solution provides IT Security Administrators with a way to safely enable BYOD and strike the balance between empowering mobile employees to be more productive with the device of their choice, while at the same time securing mobile devices and the enterprise against advanced threats.

**Together enact risk-based policy to prevent a single mobile device
from compromising the enterprise**

How Zimperium integrates into VMware Workspace ONE® UEM

- **Ease of Deployment and Upgrades:** VMware Workspace ONE® UEM provides an easy-to-use policy management solution to deploy and upgrade Zimperium Mobile Threat Defense (MTD) - formerly known as zIPS - to a large number of employees' devices via their internal app delivery capabilities.
- **Protect your Corporate Infrastructure:** When Zimperium detects that a device has been compromised, VMware Workspace ONE® UEM can enact risk-based compliance policies to remediate depending on the severity of the threat. The policies can temporarily disable the mobile device's connections to corporate services (email or other apps, Wi-Fi and VPN) or even remove enterprise applications from the device. These actions stop the spread of the infection and prevent risk to corporate data.
- **Alerting & Reporting:** Zimperium provides comprehensive mobile threat forensics along with configurable end-user notifications and administrator alerts by attack type to suit the needs of any enterprise. Privacy data collection policies are also provided to meet regional regulations as well.
- **Enforcement:** VMware Workspace ONE® UEM device management capabilities ensure the Zimperium MTD app is not disabled or removed by users to ensure cyberattack protection is always enabled.

Contact us

Zimperium is a leading enterprise mobile threat protection provider. Only the Zimperium platform delivers continuous and real-time threat protection to both devices and applications. Through its disruptive, on-device detection engine, Zimperium generates "self-protecting" apps and protects against the broadest array of mobile attacks.

FEATURES & BENEFITS	VMware Workspace ONE® UEM	ZIMPERIUM
Access controls to corporate email, VPN, app delivery & removal	✓	
Secure corporate document sharing & secure web security	✓	
Ability to revoke access from non-complaint mobile devices	✓	
"Always on" protection on the device	✓	✓
Detect if device has proper security enabled (e.g. pin, encryption)	✓	✓
Jailbreak detection	✓	✓
Root/compromise protection	✓	✓
Network attack (e.g. MITM, rogue access points) detection		✓
OS compromise and exploitation detection		✓
Malicious app and profile detection		✓
Mobile phishing detection		✓
Provide detailed app risk & privacy analysis		✓
Reconnaissance scan detection		✓
Detailed mobile threat intelligence and forensics		✓
